

Broker365

Features Record

All 24 Features

Shipped through the entitlement-gated build cycle

At a glance

✔️ 4 subscription plans ✔️ 24 feature flags ✔️ 24 features delivered

✔️ Build status: green (npm run build exits 0)

✔️ Multi-tenant safe: companyId scope on every API path

✔️ Generated from lib/plans.ts ✔️ single source of truth

Executive Summary

This document records every customer-facing feature delivered through the entitlement build cycle. It is generated from lib/plans.ts so the catalogue here is the same one the running application uses for plan resolution and gating.

The build introduces a four-tier subscription model i.e. ½ Basic, Standard, Pro, and Enterprise i.e. ½ with per-feature override flags so any company can be granted or denied individual capabilities without changing tiers. Twenty-four features are wired through the system, covering lead capture, inventory hierarchy, broker-channel tracking, opportunity matching, resource libraries, exports, bulk imports, and granular per-member permissions.

What was delivered

🔗 F1 A reusable Phase-0 entitlement system: plans constant, runtime resolver, server-side requireFeature middleware, client useFeature hook, plan-aware sidebar, and a superadmin UI for assigning plans and per-feature overrides.

🔗 F24 individually-flagged features grouped into four tiers, each shippable in isolation and reversible without data loss.

🔗 F10 Defensive multi-tenant architecture: every read/write path filters by companyId from the JWT, never the request body. Chain-of-trust queries (e.g. unit !i.e. ½ tower !i.e. ½ project !i.e. ½ company) v e

🔗 F15 backwards-compatible Prisma migrations registered in scripts/migrations/index.ts. All are idempotent; legacy rows are coerced or back-filled, never destroyed.

🔗 F14 Bulk-import flows for leads, inventory, broker requirements, and projects with column-alias resolution and best-effort batches (5,000 rows).

🔗 F1 Excel export endpoints for leads, inventory, and broker requirements, gated per plan.

Honest scope notes

🔗 F17 Projects Working ships as MVP i.e. ½ full hierarchy schema, listing page, 2-step add wizard, and project detail page with inline tower/unit add. Edit-in-place for individual towers/units is a follow-up.

🔗 F20 Learn & Grow is URL-based today. The schema is ready for Vercel Blob / S3 wiring; users paste links to externally-hosted documents in the meantime.

Subscription Plans

Plans are stored on Company.plan and resolved at request time alongside Company.featureFlags overrides. Higher tiers extend lower tiers automatically.

Plan	Audience	Price	Unlocks
Basic	Solo broker / 1-3 users	€ 999 / user / mo	8 features
Standard	Active brokerage / 4-15 users	€ 1,499 / user / mo	14 features
Pro	Established / 15-50 users	€ 3,499 / user / mo	23 features
Enterprise	Large team / 50+ users	€ 7,999 / user / mo	24 features

Per-tier feature breakdown

- Basic** 8 features € Solo broker / 1-3 users
 - daily_plan Daily Plan

Feature Catalogue

Every shipped feature with its identifier, plan tier, and one-line description. Status reflects the delivery state at the time of this record.

ID	Feature	Tier	Status	Description
F1	Daily Plan	Basic	Shipped	Morning commitment + evening achievements journal per user
F2	Lead Transfer	Basic	Shipped	Transfer leads between teammates
F3	Dead Leads Tab	Basic	Shipped	Dedicated tab filtering archived/dead leads
F4	Buyer / Rental Tabs	Basic	Shipped	"All Buyers" vs "Rental Business" tab split on leads list
F5	Inventory Sales / Rent Tabs	Basic	Shipped	Sales vs Rent tab split inside inventory
F6	Extended Lead Statuses	Basic	Shipped	Hot / NotConnected / Serious / Potential / LongTerm / DeadLead / Completed
F7	Extended Property Statuses	Basic	Shipped	Vacant / Self-Occupied / Rental / For-Sale taxonomy
F8	Source Preset Dropdown	Basic	Shipped	99acres / Magicbricks / Housing.com / Meta Ads / WhatsApp / Facebook / Google / Website / Direct / Referral
F9	Inventory 3-Step Wizard	Standard	Shipped	Seller ↔ Property ↔ Source/Assignment
F10	Project / Sector / Unit Fields	Standard	Shipped	Structured property identification (project, sector, unit, tower, typology)
F11	Demand / Payment / Loan Fields	Standard	Shipped	Registry vs Transfer case toggle, loan status, payment status, owner demand
F12	Multiple Mobile Numbers	Standard	Shipped	Repeating mobile-number input per owner
F13	Bulk Inventory Upload	Standard	Shipped	Excel/CSV import + sample template for properties
F14	Export Leads to Excel	Standard	Shipped	One-click Excel export of the leads list
F15	Bulk Broker Requirements Upload	Pro	Shipped	Excel/CSV import for broker requirements
F16	Bulk Projects Upload	Pro	Shipped	Excel/CSV import for whole projects + units
F17	Projects Working Module	Pro	Shipped (MVP)	Project ↔ Tower ↔ Floor ↔ Unit hierarchy (Commercial/Residential ↔ Ready/Under-Construction)
F18	Brokers Requirements Module	Pro	Shipped	Tracker for incoming broker-side requirements
F19	Find Opportunity (Matcher)	Pro	Shipped	Auto-match buyers (leads) ↔ sellers (inventory) / sector / budget
F20	Learn & Grow	Pro	Shipped (URL-only)	Folder + file resource library ↔ paste links to PDFs, videos, decks (URL-based for now)
F21	Reference Database	Pro	Shipped	Curated public-project catalogue with brochure links ↔ share externally
F22	Add New Project Wizard	Pro	Shipped	2-step Project + Units wizard

ID	Feature	Tier	Status	Description
F23	Export Broker Requirements	Pro	Shipped	Excel export for broker requirements list
F24	Per-Member Permissions	Enterprise	Shipped	Per-user permission toggles beyond fixed role tiers

Phase distribution

Phase	Features delivered
Phase 1	8
Phase 2	6
Phase 3	9
Phase 4	1

Architecture & Security

Three-layer access model

- 🔗 Layer 1 🔗 Plan: `Company.plan` + `Company.featureFlags` decide which features the company can use. Resolved per-request via `lib/entitlements.ts`.
- 🔗 Layer 2 🔗 Role: `User.role` (superadmin / admin / user) constrains who within the company can do what 🔗 hidden in the sidebar, blocked at the page guard, rejected at the API.
- 🔗 Layer 3 🔗 Per-member permissions (F24, Enterprise): grant or revoke individual capabilities on top of the role baseline via `User.permissions`.

Triple-gating on every feature

- 🔗 UI: gated nav items hide when the feature flag is off.
- 🔗 Page: server-rendered guards short-circuit to the `FeatureLocked` empty-state.
- 🔗 API: `requireFeature` middleware returns 403 with `{ upgradeRequired: true }` before any DB write.
- 🔗 Why all three: a UI bug or a deep-linked URL still cannot bypass the API gate.

Multi-tenant safety

- 🔗 Every read/write filters by `companyId` from the JWT 🔗 never from the request body.
- 🔗 Chain-of-trust queries verify the full ancestry in a single Prisma `where-clause` (`project ! company match inline`).
- 🔗 Soft delete via `deletedAt` on every collection means a bad mutation is recoverable; team-member ownership filters compose with `deletedAt: null` on every query.

Auditability

- 🔗 `recordAudit()` is wired on every superadmin and per-member-permissions write.
- 🔗 Bulk imports report per-row outcomes (imported / skipped) so an admin can re-act on partial failures.
- 🔗 Companies can export their data in Excel from any list module 🔗 no platform lock-in.

Data lifecycle

- 🔗 15 idempotent migrations registered in `scripts/migrations/index.ts` 🔗 safe to re-run.
- 🔗 Backfills coerce legacy values rather than dropping rows (e.g. `ownerPhone` !).
- 🔗 No destructive schema changes 🔗 every Prisma update is additive or nullable.

Verify checklist

Before promoting these changes to production, work through this list against a staging copy of the database.

Build & types

- 🔗^{1/2} `npx prisma generate` 🔗^{1/2} confirms schema compiles
- 🔗^{1/2} `npx tsc --noEmit` 🔗^{1/2} confirms TypeScript clean
- 🔗^{1/2} `npx tsx scripts/migrate.ts` 🔗^{1/2} runs all 15 migrations idempotently
- 🔗^{1/2} `npm run build` 🔗^{1/2} confirms Next.js production build is green

Runtime smoke tests

- 🔗^{1/2} Superadmin can assign Basic / Standard / Pro / Enterprise plans on `/superadmin/companies/[id]/features`.
- 🔗^{1/2} Per-feature override toggles (Plan / Grant / Revoke) update the company at PATCH time and resolve correctly on the next request.
- 🔗^{1/2} Admin user on a Pro-plan company sees Projects Working, Brokers Requirements, Find Opportunity, Reference DB in the sidebar; Basic-plan company sees only the basic set.
- 🔗^{1/2} Hitting a gated API path directly (e.g. `/api/projects`) returns 403 with `upgradeRequired: true` when the feature is off.
- 🔗^{1/2} Bulk imports report per-row outcomes; valid rows persist while invalid rows surface in the skipped list.
- 🔗^{1/2} Excel exports honour the same filters as the list page and respect team-member ownership.
